PLACENTIA INCREASES INTERNET SPEEDS AND BECOMES A FIBERCITY

PLACENTIA, CA – The Placentia City Council unanimously voted to grant permission to SiFi Networks for construction of a fiber optic network throughout the City. The fiber optic network enables service providers to connect to the highest-quality, most technologically-capable, fastest internet available.

“We’re excited to enhance the quality and availability of internet access for all Placentia residents and businesses,” said Mayor Rhonda Shader. “The deployment of Citywide fiber optic gives residents access to the fastest and best technology available.”

The fiber optic network increases residential and business connectivity opportunities by offering a superfast network for service providers to then provide to their customers. By partnering with SiFi Networks to become a FiberCity, Placentia joins other cities in Orange County providing the fastest, most reliable internet to residential homes and businesses.

“The partnership with SiFi Networks will help attract and retain businesses in the City of Placentia,” said Councilmember Jeremy Yamaguchi. “Internet speeds and availability are a top priority when searching for real estate and the City is excited to offer the best in technology connectivity to continue to bolster economic development.”

In addition to homes and businesses, the City’s crucial service providers including public safety, the Placentia Yorba Linda School District and local hospitals will also benefit from superfast internet, increasing response times as well as connectivity.

SiFi Networks is currently working with the City of Fullerton to become a FiberCity, seeing the first few homes provided with rapid internet speeds within the next few months. The City of Placentia will work diligently with SiFi Networks to execute the fiber optic network and quickly provide Placentia residents and businesses with the best internet connectivity available.
