**Subject: 2018 Citywide Pavement Management Program Update**

Dear Luis:

Harris & Associates hereby submits this Report of the 2018 Citywide Pavement Management Program Update. This report has been prepared in conformance with the Orange County Transportation Authority "Countywide Pavement Management Program Guidelines" dated January 2018.

The information contained in this report presents the findings from the system data associated with the pavement condition of the City's street network. The City is also provided with the information that was used to develop the improvement programs. The report covers the following categories:

- Pavement Condition Summaries – (Arterials (MPAH) and Local Streets)
- Preservation and Repair Activities – (Arterials (MPAH) and Local Streets)
- Projected Budgets for Projects based on those Preservation and Repair Activities

It has been a pleasure working with the City on the City's Pavement Management Program. Should you have any questions or comments, please contact us at (949) 655-3900.

Sincerely,  
**Harris & Associates**

Randall Bliss, PE  
Senior Project Manager

## TABLE OF CONTENTS

Executive Summary	
I. Introduction .....	1
II. Methodology .....	3
Maintenance Strategy Assignments.....	6
Projected Work Programs .....	8
Pavement Management QA/QC Plan .....	18
III. Condition Distribution Report.....	23
IV. Pavement Condition Index (PCI) Report .....	30
A. Street Name Order (Residential)	
B. Street Name Order (Arterial)	
C. PCI Order (Residential)	
D. PCI Order (Arterial)	
V. Work Programs (next 11 years) based on Various Funding Levels .....	82
A. Current Funding Level	
B. To Maintain Current Avg. PCI	
C. To Improve PCI	
D. To Achieve Countywide Avg. PCI	
VI. Work History Report .....	238
Appendix A: Citywide Condition Map	
Appendix B: Pavement Management Plan	

## EXECUTIVE SUMMARY

The Pavement Management Program (PMP) for the City of Placentia provides a current inventory, with condition and preservation requirements for the roadways, and a forecasting of the budget needs.

While the following recommendations have been generated by the Pavement Management Program, they are for planning purposes only and are not intended to replace sound engineering judgment. Final project recommendations should be weighed against the actual approach the City wishes to utilize in scheduling the workloads for contracting purposes. In addition, an engineering review of the pavement condition may indicate that a particular pavement section needs attention earlier than the other roads in its localized area. This may happen during the design review, particularly when it is apparent that a street can be saved from more costly maintenance treatments if preservation treatment is applied.

The use of the word Arterial in this report refers to roadways identified in the OCTA Master Plan of Arterial Highways (MPAH).

### Replacement Value & Quantity of Pavement

The entire pavement network within the City of Placentia has **131.48** centerline miles of paved surfaced street segments. This equates to 24.5 million square feet of pavement. The estimated replacement value of this pavement is \$112.3 million.

**Residential Streets** – consist of Residential low volume streets (**85.39** centerline miles).

**Arterial Streets** – consist of Major Arterials, Primary Arterials and Secondary Arterial streets (**46.09** centerline miles) as identified by OCTA’s Master Plan of Arterial Highways (MPAH)

### City’s Pavement Condition

The overall condition of the City of Placentia’s road network is “Fair”, with an average weighted “**Pavement Condition Index**” (PCI) of **67**, with 100 being a brand new street and 0 being a badly deteriorated street with virtually no remaining life.

**Residential Streets** are “Fair” with an average weighted PCI of **71** and  
**Arterial Streets** are “Fair” with an average weighted PCI of **60**.

Weighted PCI’s are determined by taking the PCI for each street segment, multiplying by the area, adding the resulting product of all segments and dividing by the total area.

### Budget Scenarios and Costs

Four (4) Scenarios were analyzed for the citywide 11-year pavement maintenance work plan:

- 1) Current Funding Level (\$1.4 M)
- 2) To Maintain Current PCI (\$3.4 M)
- 3) To Improve PCI (\$4.6 M)
- 4) To Achieve Countywide Avg. PCI (\$5.0 M)

All strategies involved the use of traditional maintenance treatments including:

- 1) **Slurry Seals** for streets in Good to Fair condition to seal the roadway surface and extend the pavement life.
- 2) **Thin Asphalt Concrete Overlays** for streets in Fair to Poor condition. A thin overlay will help reduce existing cracking, improve drivability and provide a new roadway wearing surface.
- 3) **Thick Asphalt Concrete Overlays** for streets in Poor condition to replace the near failing asphalt surface. Thick overlays will eliminate existing cracking, improve drivability and provide a new roadway wearing surface.
- 4) **Roadway Reconstruction** for streets in Very Poor condition. Reconstruction will address failing asphalt concrete pavement and underlying failing base material by reconstructing the entire roadway structural section.

Preventative maintenance on streets with better than average PCI ratings must be considered in combination with the more extensive rehabilitation of failing streets to realize the maximum net benefit and reduce the long term costs. The Micro Paver software will apply one of the maintenance treatments listed above based on a combination of the PCI and the types of pavement distresses observed. Pavement distress are categorized as: 1) Weather related (such as Weathering and Block Cracking) or; 2) Structurally Related (such as Alligator Cracking and Rutting). Streets with relatively similar PCIs may receive different treatments recommendation depending on whether the distresses can be caused by weather or traffic loading. Future roadway maintenance plans for the City should be based on the general maintenance strategies developed from this pavement system analysis in combination with the other major contributing factors.

**Key Assumptions and Terms:**

- 1.) Preventative pavement maintenance will continue to be a priority and pavement maintenance funding will not decrease during the analysis period.
- 2.) 3% annual inflation was applied to all pavement treatment unit costs.
- 3.) Deferred maintenance, or backlog, is the work that is recommended and would ideally be performed with an unlimited budget, but due to budget limitations must be deferred to a later time.

**Results of Funding Scenarios**

A summary of the four (4) funding scenarios can be found below:

1) **CURRENT FUNDING LEVEL (\$1.4 M)**  
**MEASURE M & RMRA FUNDING**

At the City's current expected pavement maintenance budget over the next 11 years of approximately \$1.4 million annually, the amount of deferred maintenance on the network would increase from \$28.9 million to \$62.5 million and the citywide average pavement condition index would decrease from 67 to 47.

2) **OPTIONAL FUNDING LEVEL (\$3.4 M)**  
**TO MAINTAIN CURRENT PCI & BACKLOG**

This scenario represents the recommended maintenance required in order for the network to strive to maintain the current PCI over the next 11 years. In order to maintain the average PCI at 64 over the next 11 years, approximately \$3.4 million per year would need to be budgeted. The amount of deferred maintenance on the network would increase from \$28.9 million to \$33 million.

3) **OPTIONAL FUNDING LEVEL (\$4.6 M)**  
**TO IMPROVE PCI & BACKLOG REVENUE**

This scenario represents the recommended maintenance required in order for the network to improve the PCI over the next 11 years. In order to improve the average PCI from 67 to 76 over the next 11 years, approximately \$4.6 million per year would need to be budgeted. The amount of deferred maintenance on the network would decrease from \$28.9 million to \$14.2 million.

4) **RECOMMENDED FUNDING LEVEL (\$5.0 M)**  
**TO ACHIEVE COUNTYWIDE AVERAGE PCI**

This scenario represents the street maintenance required to achieve countywide average PCI. If the city could expend approximately \$5.0 million annually over the next 11 years, the average PCI would increase from 67 to 79 by FY2028-29. The amount of deferred maintenance on the network would decrease from \$28.9 million to \$8.6 million.

**Quality Control & Quality Assurance QA/QC** -Per OCTA requirements, Quality Control & Quality Assurance (QC/QA) procedures are outlined in this report to insure that all procedures used to collect distress data comply with OCTA's guidelines and result in the delivery of a quality data product. Quality control checks are critical on projects such as these when large amount of data needs to be collected and processed. The QC program will be implemented at various stages of the project and include corrective actions when deficiencies are encountered.

**City of Placentia**  
**2018 Citywide Pavement Management Program**  
**Update Report – June 19, 2018**

**Executive Summary**

**Calendar and Project Schedule** - Per OCTA guidelines all streets identified in the Master Plan for Arterial Highways (MPAH) must be surveyed at least once every two years. All local streets must be surveyed at least once every six years. Given this requirement the next re-inspection and Pavement management Program (PMP) update of the Arterial streets will need to be completed by June of 2018. The following is the existing six (6) year Pavement Management Program and CIP schedule:

June 2018	Submitted updated report to OCTA for approval and Measure M2 eligibility. Accepted report included an update of both <b>Arterial and Residential</b> streets.
July 2018	Begin design of annual CIP for City wide street rehabilitation.
March 2019	Complete CIP contract documents, advertise and award annual CIP project
June 2019	Complete construction of annual street rehabilitation CIP by June 30th
January 2020	Begin design of annual CIP for City wide street rehabilitation.
February 2020	Begin Pavement Management Program (PMP) updates of all <b>Arterial</b> streets, Includes re-inspections and draft report.
March 2020	Complete CIP contract documents, advertise and award annual CIP project
June 2020	Approve updated report and submit to OCTA for approval and Measure M2 eligibility. Report to include update of <b>Arterial</b> streets.
June 2020	Complete construction of annual street rehabilitation CIP by June 30th
January 2021	Begin design of annual CIP for City wide street rehabilitation.
March 2021	Complete CIP contract documents, advertise and award annual CIP project
June 2021	Complete construction of annual street rehabilitation CIP by June 30th
January 2022	Begin design of annual CIP for City wide street rehabilitation.
February 2022	Begin Pavement Management Program (PMP) updates of all <b>Arterial</b> streets, Includes re-inspections and draft report.
March 2022	Complete CIP contract documents, advertise and award annual CIP project.
June 2022	Approve updated report and submit to OCTA for approval and Measure M2 eligibility. Report to include update of <b>Arterial</b> streets.
June 2022	Complete construction of annual street rehabilitation CIP by June 30th
January 2023	Begin design of annual CIP for City wide street rehabilitation.
March 2023	Complete CIP contract documents, advertise and award annual CIP project
June 2023	Complete construction of annual street rehabilitation CIP by June 30th
January 2024	Begin design of annual CIP for City wide street rehabilitation.
February 2024	Begin Pavement Management Program (PMP) update of both <b>Residential and Arterial</b> streets, Includes complete re-inspections and draft report.
March 2024	Complete CIP contract documents, advertise and award annual CIP project
June 2024	Approve updated report and submit to OCTA for approval and Measure M2 eligibility. Report to include update of both <b>Arterial and Residential</b> streets.
June 2024	Complete construction of annual street rehabilitation CIP by June 30th
	Repeat 7 year cycle

This report contains additional information presented in the sections described as follows:

- Section I is an introduction to the system, current conditions, strategies and recommendations.
- Section II is the methodology used to field survey, deterioration curves, maintenance, and budgets.
- Section III is the Condition Distribution Report.
- Section IV is the PCI Report.
- Section V is the Work Programs.
- Section VI is the Work History Report.

**SECTION I**  
**INTRODUCTION**

**NEED FOR PAVEMENT MANAGEMENT SYSTEM**

A Citywide Pavement Management Program will assist City personnel by providing current technical data to maintain a desirable level of pavement performance, while optimizing the expenditure of limited fiscal resources.

Specifically, the program provides administrators and maintenance personnel with:

- A current inventory of all public roadways
- The current pavement condition for all public roadways
- A project listing of all pavement needing maintenance, rehabilitation, or replacement
- A forecast of budget needs for maintenance, rehabilitation, or replacement of deficient sections

**THE PAVEMENT NETWORK**

The entire pavement network within the City of Placentia is comprised of 131.48 centerline (CL) miles of paved surfaces. 85.39 miles of Residential Streets low volume streets and 46.09 miles of Arterial Streets which consist of Major Arterials, Primary Arterials and Secondary Arterial streets as identified by OCTA’s Master Plan of Arterial Highways (MPAH). To assist in planning maintenance needs, the City’s road system data was compiled. The following is a summary of the mileage, area, and replacement value of pavement.

Classification		Square Feet	CLine Miles	Lane Miles	Unit Cost for Replacement	Total Replacement Value	Percent of Replacement Value
Local	Residential	15,765,581	85.39	171.01	\$ 4.59	\$ 72,364,017	64.38%
MPAH	Major Arterial	575,792	1.88	6.71	\$ 4.59	\$ 2,642,885	2.35%
	Primary Arterial	2,984,029	15.09	30.41	\$ 4.59	\$ 13,696,693	12.19%
	Secondary Arterial	4,113,625	23.59	47.72	\$ 4.59	\$ 18,881,539	16.80%
	Collector	1,047,420	5.53	8.37	\$ 4.59	\$ 4,807,658	4.28%
<b>TOTALS</b>		<b>24,486,447</b>	<b>131.48</b>	<b>264.21</b>		<b>\$ 112,392,792</b>	<b>100%</b>

**CURRENT CONDITIONS**

As part of the development of the Pavement Management Program for the City of Placentia, a visual survey of all pavement segments in the pavement network was conducted to assess the existing surface condition. The guidelines specified by ASTM D6433-11 and Army Corps of Engineers in their *Pavement Distress Identification Guide for Asphalt-Surfaced Roads and Parking Lots* and *Pavement Distress Identification Guide for Jointed Concrete Roads and Parking Lot*, both dated June 1997, were used as the basis of the visual survey. Upon completion of this survey, a Pavement Condition Index (PCI) was calculated for each segment in the network to reflect overall pavement condition. The PCI system is a rating mechanism used to describe the condition of the City’s pavement and has been adopted as the nation’s standard rating system by AASHTO. Ranging between "0" and "100," a PCI of "0" would correspond to a badly deteriorated pavement with virtually no remaining life, while a PCI of "100" would correspond to a pavement with proper engineering design and construction at the beginning of its life cycle. Refer to graphs in Section III for a summary of current conditions.

The table below relates PCI ranges to general pavement condition definitions.

<u>PCI RANGE</u>	<u>CONDITION</u>
86 – 100	Very Good
75 – 85	Good
60 – 74	Fair
41 – 59	Poor
0 – 40	Very Poor

**PCI Ranges\***

\* These ranges are per OCTA Guidelines

The overall condition of the City of Placentia’s road network based on a visual inspection of all streets has a current conditions is “Fair” with an Avg. Weighted PCI of 67 (Residential PCI is 71 “Fair” condition & Arterial PCI is 60 “Fair” condition). Weight PCI’s are determined by taking the PCI for each street segment, multiplying by the area, adding the resulting product of all segments and dividing by the total area.

**OVERALL STRATEGY**

Based on the results of the condition survey, pavement maintenance/rehabilitation strategies were developed. A listing of the rehabilitation and maintenance activities utilized in the strategy development is presented in Section II. Each activity is representative of the types of work that have been programmed as part of the long-term rehabilitation and maintenance requirements of the City’s street network.

Based on current and projected pavement rehabilitation and maintenance needs, annual work programs have been prepared. The tables and charts in Section II show the projected work program totals along with the total deferred maintenance for each year.

All strategies involved the use of traditional maintenance treatments such as Slurry Seals and Thin and Thick Asphalt Concrete Overlays.

All repair activities were based on distresses observed at the time of the field survey.

## **SECTION II METHODOLOGY**

The following section provides a description of the methodology and rationale utilized in determining the recommended actions identified in this report.

### **Field Survey**

An inventory of street data for each public roadway within the City of Placentia was verified. Data was categorized by street and “maintenance” segment. Maintenance segment limits were identified by determining the logical maintenance practices that would apply to each street and may vary from street to street, i.e. intersection to intersection, change in pavement width, drainage conditions, crown of the roadway, etc. per the City’s established segment limits. All new inspection data collected was entered into the APWA Micro PAVER version 6.5 pavement management software.

### **Pavement Condition Index (PCI)**

After the data entry procedures were completed, a resultant distress rating was calculated for each segment. The distress rating is calculated using an algorithm developed by the Army Corps of Engineers that is recommended by the American Public Works Association and incorporated within the Micro PAVER software. The algorithm begins by giving each pavement section a score of 100 then deducting point values based on the pavement distress found within the section weighted by the quantity of distress. The Army Corps has assigned deduct values based on severity (low, moderate, or high) and the density of each distress.

The algorithm weighs the total deducts within a section and calculates a total distress rating between 0 (failed) and 100 (excellent).

The PCI is an overall measure of the condition of the road surface based on this scale. The summary of all road condition data and the representative PCI’s are located in the Condition Data Report in Section IV.

Once the PCI has been established for a pavement section, the analysis and workload predictions commence. Predictions on future pavement performance are based on a pavement deterioration curves researched and developed by the Army Corps of Engineers. The Army Corps research for the deterioration curves was based on test sections that are not located in California and may have been exposed to differing weather conditions that affect the aging. For this reason the PCI developed from the Army Corps curves are conservative for the environment of your City and may project slightly lower PCI’s.

Per OCTA guidelines, the City is required to perform a PMP update and report the findings to OCTA every two year (on even years). OCTA requires arterial streets be re-inspection every two years and residential streets every six years. The residential streets were last inspected in 2016 and based on OCTA requirements, arterial and residential streets were both re-inspected for this current 2016 PMP update. The most accurate method of estimating the City’s current pavement condition is through the re-inspection process. Physically performing a visual evaluation of each street basically captures a snap shot in time the existing pavement condition. With our recent re-inspection of the entire City, the current citywide PCI calculation is the most accurate estimation of the condition of the City’s roadway system.

The current calculated citywide weighted PCI of 67 is based on the recent re-inspection data for Arterial Streets and Residential Streets based on deterioration curve. The citywide PCI estimated for the last report, provided to OCTA in 2016, was 72. Therefore the overall citywide PCI decreased by 5 points from that estimated in the last report. The PCI of 78, shown in the 2016 report, included PCI values for residential streets based on calculated from physical re-inspections. Without re-inspections, the PCI for a particular street is estimated by using the last inspection data and deterioration curves built into the Micro Paver software. The deterioration curves on the next page generally show expected deterioration rate for typical asphalt (AC) and Portland cement concrete (PCC) pavements. For example: If a roadway was visually inspected in 2010 and found to have a PCI of 70; the PCI value estimated in 2012, from the deterioration curves, would be approximately 66; the value estimated in 2014 might be approximately 62; and the value for 2016 might be 59; and so on. If this same street was re-inspected in 2016 the PCI calculated from this re-inspection data may be 61, which is higher than the PCI of 59 that was estimated from the deterioration curves. As stated previously, PCIs calculated from re-inspection data are more accurate than PCI's estimated from the deterioration curves and if the current PCI (based on re-inspections) is better than that of the previously estimated PCI, one explanation is that the pavement is simply performing better than the deterioration curve predictions. Another possible contributing factor to the increase in the PCI is that the individual pavement distresses that contributed to the PCI in 2010 have been corrected through annual Capital Improvement Programs (CIP) or general maintenance. For example: If a particular street had a PCI of 70 in 2010 and that value was based on the street having a distress of Alligator Cracking over a small percentage of the street, upon re-inspection in 2016 it may be found that the Alligator Cracking has been repaired, through maintenance work, and therefore that distress no longer contributes to the reduction in the PCI calculation and the street could be rated in better condition in 2016 than it was in 2010 due to the repair work. The general point here is that re-inspections capture all the corrective work that was performed on residential streets since the last inspection in 2010. It is estimated that an increase of approximately 1 PCI point can be attributed to capturing corrective maintenance work as part of the current re-inspection.

The deterioration curves on this page show expected deterioration rate for typical asphalt (AC) and portland cement concrete (PCC) pavement.

**Standard Deterioration Curve for Asphalt Concrete (AC) Pavements  
Expected Useful Life of Approximately 25 Years**

**Standard Deterioration Curve for Portland Cement Concrete (PCC) Pavements  
Expected Useful Life of Approximately 50 Years**

As a pavement ages, the system predicts the PCI of the pavement based on the deterioration curves.

The next step in the analysis is to determine at what point simple maintenance has become major rehabilitation.

As you can see by the above graphic, by doing preventative maintenance on a pavement earlier in the pavements life, a substantial amount of money can be saved.

**MAINTENANCE STRATEGY ASSIGNMENTS**

The PCI and distress types are used by the system to schedule each pavement segment for maintenance activities. The Micro PAVER program recommends a specific maintenance activity based on the PCI and budget constraints. The Micro PAVER system generates work based on categories of maintenance, such as global and major maintenance. Maintenance activities per category are defined as follows:

**Global Maintenance - Surface treatments generally utilized Slurry Seal treatments**

Surface treatments applied to pavements with minimal surface distress to seal the roadway surfaces and extend pavement life. Generally it consists of a sealant or thin overlay. The typical cost for a slurry seal is \$0.30 per square foot.

**Major Maintenance – The applications of treatments that are more cost-effective alternatives to reconstruction of the entire pavement surfaces but provide the required structural support. Major maintenance includes asphalt concrete overlays and roadway reconstruction, if required.**

The Micro PAVER system derives costs for major maintenance based on cost by condition ranges. The following are updated costs developed by Harris & Associates based on ENR Construction Cost Index data over the past 10 years:

Condition (PCI)	Unit Cost	Possible Treatment	MicroPaver Maintenance Category
100	\$0.00		No Treatment
90	\$0.00 - \$0.30	None/ Slurry Seal	No Treatment/ Global MR
80	\$0.30		Global MR
70	\$0.30 - \$1.80	1.5' AC Overlay	Global MR/ Major Above Critical
60			Global MR/ Major Above Critical
50	\$1.80 - \$2.25		Major Above and Below Critical
40	\$2.25	1.5" - 3.0" AC Overlay	Major Below Critical
30	\$2.25 - \$4.60		Major Below Critical
20	\$4.60		Major Below Critical
10	\$6.00	Reconstruction	Major Below Critical
0	\$7.00		Major Below Critical

**AC Overlay** - Placement of a layer of hot-mixed asphalt concrete (1.5 to 3.0 inches in thickness) over the existing pavement surface. Cold milling is performed prior to the overlay to reduce the total height of asphalt and assure alignment with existing gutter line. This also includes “dig-outs” and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increased structural strength to the pavement section.

- **Asphalt Rubber Hot Mix (ARHM)** – Rubberized asphalt has several advantages over a conventional overlay. These include performance and environmental impacts. Specifically, using crumb rubber modified binders in pavement applications benefit local agencies by:
  - Pavement resisting cracks by being more flexible;
  - Providing cost savings due to longer life cycles and decreased maintenance;
  - Improving skid resistance;
  - Decreasing noise; and
  - Providing long lasting color contrast from marking and striping
- **AC Overlay with Reinforcing Fabric** - A conventional 1.5 or 3.0 inch overlay preceded by the placement of a woven reinforcing fabric (Petromat, Glassgrid, Ammopave, etc.) set in a prescribed amount of asphalt binder. Cold Milling, “dig-outs” and crack sealing are performed, as well. Typically used where structural strengthening is required.

**Reconstruction** - Removal of the existing pavement section to a prescribed depth, followed by the placement of a conventional flexible pavement section (i.e. aggregate subbase, aggregate base, and asphalt concrete) or a full depth asphalt section. Each classification of road has a typical design cross-section based upon anticipated traffic loading.

**MAINTENANCE & REPAIR DECISIONS**

Once the activities were chosen and unit costs were defined, budgets and work assignments were generated for each work program on an annual basis. Using the pavement deterioration curves for each type of pavement surface and class of road, both current year and future years work requirements for each pavement segment within the City were determined. The current PCI is reduced annually based on the deterioration curve, maintenance activities increase the PCI value as they are applied to the segment. The overall program is dynamic in that each strategy consists of a cyclic series of actions that simulates pavement's anticipated life cycle.

**PROJECTED WORK PROGRAMS**

Four (4) Scenarios were analyzed for the citywide 11-year pavement maintenance work plan:

- 1) Current Funding Level (\$1.4 M)
- 2) To Maintain Current PCI (\$3.4 M)
- 3) To Improve PCI (\$4.6 M)
- 4) To Achieve Countywide Avg. PCI (\$5.0 M)

**CURRENT FUNDING LEVEL (\$1.4 M) – RESIDENTIAL & ARTERIAL**  
**MEASURE M & RMRA FUNDING**

At the City’s current expected pavement maintenance budget over the next 11 years of approximately \$1.4 million annually, the amount of deferred maintenance on the network would increase from \$28.9 million to \$62.5 million and the citywide average pavement condition index would decrease from 67 to 47.

FY	Budget	Work Program	Deferred	Average Condition (Before)	Average Condition (After)
2018-19	\$700,000	\$699,987	\$28,892,374	67	68
2019-20	\$1,400,000	\$1,399,944	\$30,278,550	64	66
2020-21	\$1,400,000	\$1,398,927	\$32,060,493	63	64
2021-22	\$1,400,000	\$1,396,777	\$34,422,399	60	61
2022-23	\$1,400,000	\$1,393,531	\$37,805,185	58	59
2023-24	\$1,400,000	\$1,398,382	\$42,489,103	56	58
2024-25	\$1,400,000	\$1,393,403	\$46,071,410	54	55
2025-26	\$1,400,000	\$1,397,791	\$50,152,641	52	53
2026-27	\$1,400,000	\$1,398,088	\$54,726,490	50	51
2027-28	\$1,400,000	\$1,396,303	\$60,202,898	48	49
2028-29	\$1,400,000	\$1,398,983	\$62,450,349	46	47
<b>11-Year Total</b>	<b>\$14,700,000</b>	<b>\$14,672,115</b>			
<b>Annual Avg:</b>		<b>\$1,333,829</b>			

**CURRENT FUNDING LEVEL – RESIDENTIAL**  
**MEASURE M & RMRA FUNDING**

<b>FY</b>	<b>Budget</b>	<b>Work Program</b>	<b>Deferred</b>	<b>Average Condition (Before)</b>	<b>Average Condition (After)</b>
2018-19	\$325,075	\$325,075	\$12,525,745	71	72
2019-20	\$1,399,944	\$1,399,944	\$12,216,312	69	71
2020-21	\$605,690	\$605,690	\$13,305,221	68	69

**OPTIONAL FUNDING LEVEL (\$3.4 M) – RESIDENTIAL & ARTERIAL  
TO MAINTAIN CURRENT PCI & BACKLOG**

This scenario represents the recommended maintenance required in order for the network to strive to maintain the current PCI over the next 11 years. In order to maintain the average PCI at 64 over the next 11 years, approximately \$3.4 million per year would need to be budgeted. The amount of deferred maintenance on the network would increase from \$28.9 million to \$33 million.

**PAVEMENT MANAGEMENT PROGRAM REPORTS**

In addition to the annual budgets, this report contains a comprehensive assemblage of pavement management reports ranging from summary reports to annual street maintenance and rehabilitation schedules. Collectively, as well as individually, the reports represent reasonable projections of pavement maintenance needs and performance based on visual condition assessments, unit cost estimates, and pavement deterioration models.

It is important to note that pavement segment dimensions and surface area, along with the action and repair costs, as presented on the reports, are accurate within tolerable limits. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, surface area to the nearest square foot, and action and repair unit costs and project estimates to the nearest penny and dollar, respectively.

**SYSTEM MAINTENANCE**

City personnel need to maintain their commitment to the preventive maintenance system, while working toward reducing the City's present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. This will require performing all necessary updates when changes are made to scheduling scenarios, unit cost information, historical data, etc. In addition, the entire pavement network will have to be re-inventoried and re-inspection at regular intervals, Arterial every 2 years and Local every 6 years (OCTA requirements). This will not only allow work to be scheduled based on the most current condition data available, but will provide City personnel with a means to monitor actual rates of pavement deterioration so appropriate modifications can be made to the system curves.

## **PAVEMENT MANAGEMENT QA/QC PLAN**

### **1. INTRODUCTION**

When performing data collection in any field, the need for quality control is paramount as it is essential for accurate planning, analysis and design. This is particularly true for collecting pavement distress data for a pavement management system.

The QC/QA Plan establishes minimum quality standards for performance and procedures for updates of the pavement management system.

#### **1.1 Objectives**

This document constitutes of a formal Quality Control Plan (QCP) for the City of Placentia. It was prepared in May 2014 and last revised in January of 2016.

Specifically, it is intended for the 2018 Pavement Management Update. The focus is on the collection of network-level pavement distress data (defined by NCHRP Synthesis 401 *Quality Management of Pavement Data Collection*, as "Network-level data collection involves collection of large quantities of pavement condition data, which is often converted to individual condition indices or aggregated into composite condition indices").

This document also addresses the QC plan requirements of the Orange County Transportation Authority (OCTA)'s "Countywide Pavement Management Program - Guidelines Manual" (section 2.4), adopted in May 2010.

#### **1.2 Structure of QC Plan**

The following components are addressed in this QC Plan:

- Condition survey procedures used
- Accuracy required for data collection
- Inspector qualifications and experience
- Safety

### **2. QUALITY CONTROL PLAN**

#### **2.1 Condition Survey Procedures**

The governing document in performing condition surveys for the City of Cypress is ASTM D6433 "Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys." Both asphalt concrete (AC) and Portland cement concrete (PCC) pavements are included in this protocol. The following distresses are collected for each pavement type.

**Asphalt Concrete (AC) Pavements**

1. Alligator (fatigue) cracking
2. Bleeding
3. Block cracking
4. Bumps and sags
5. Corrugation
6. Depression
7. Edge cracking
8. Joint reflection cracking
9. Lane/Shoulder drop off
10. Longitudinal & Transverse cracking
11. Patching and utility cut patching
12. Polished aggregate
13. Potholes
14. Railroad crossing
15. Rutting
16. Shoving
17. Slippage cracking
18. Swell
19. Weathering
20. Raveling

**Portland Cement Concrete (Jointed)**

1. Blowup/buckling
2. Corner breaks
3. Divided slab
4. Durability ("D") cracking
5. Faulting
6. Joint seal damage
7. Lane/shoulder drop off
8. Linear cracking
9. Patching (large) and utility cuts
10. Patching (small)
11. Polished aggregate
12. Popouts
13. Pumping
14. Punchout
15. Railroad crossing
16. Scaling, map cracking and crazing
17. Shrinkage cracks
18. Spalling (corner)
19. Spalling (joint)

At a minimum the inspectors were primarily concerned with eight distresses: alligator cracking, block cracking, edge cracking, longitudinal and transverse cracking, patches or utility repairs, bleeding, weathering and rutting.

Any exceptions to the above procedures are discussed before any surveys are performed. They are documented in the paragraphs below.

[Note to agency: these are usually related to distresses or situations that are not covered in the manuals. Examples include roller check marks or edge cracking on streets with no curbs and gutters. Others include the raveling of surface seals or the use of open-graded asphalt concrete mixes where the surface appears to have large voids present. Any modifications must be documented and included in this document. Photos are extremely helpful.]

All surveys are performed as walking and windshield surveys, and a minimum 10% sampling rate is utilized. Field crews are typically composed of a one-person crew on residential streets and some collectors, and up to two-person crews for major arterials, depending on traffic volumes and speeds. The safety of field personnel is paramount in all instances.

The sample unit selected must be representative of the entire pavement section. This assumes that the section is homogenous; if it is not homogeneous, then the section must be split according to the criteria agreed upon by the agency. Typically, the criteria used are:

- Pavement condition
- Construction age, if known
- Maintenance history, if known
- Traffic volumes (or functional classification as a surrogate)
- Surface types (e.g. asphalt concrete or Portland cement concrete)
- Geometric elements (e.g. widths)

Any modifications to the section inventory data are documented in the pavement management report.

A sample unit must be between 2,500 ± 1,000 square feet in conformance with ASTM D6433 protocols. Typical sample unit dimensions are 100 feet long by the width of the street. Streets that are wider than 40 feet wide will have shorter lengths (generally 50 feet) or if they are divided by a raised median, separate sample units will be taken in each direction.

Any pavement areas that are not representative of the section will be noted and surveyed as an additional sample unit.

## **2.2 Accuracy Required for Data Collection**

The accuracy required for data collection has two components, both of which are further described in the following paragraphs.

- Re-inspections
- PCI comparisons with past surveys

As with any inspection of a City-wide network, a certain amount of street segments are expected to not be representative of what true conditions are. Most of these unexpected discrepancies are due to human error in judgment or input into the software system. Occasionally some pavements are initially deemed to be “Very Good” without a history of repairs from the previous year’s status of “Good”. Conversely, some pavement inspections indicate a drastic degrade when otherwise expected. In all of these instances, staff has re-inspected the street pavement to verify the accuracy of the inspection

### **2.2.1 Random and Systematic Re-Inspections**

A minimum of 5% of the total sample units will be re-inspected and this 5% will be selected based on both a random and systematic basis. All re-inspections are made by an engineer or inspector other than the original inspector.

#### **Random Re-inspections**

Random re-inspections will include a representative selection across the following categories:

- Functional classes (i.e. arterials, collectors, locals);
- Surface types (e.g. asphalt concrete or Portland cement concrete);
- Pavement conditions (e.g. good, fair, poor);

- Inspectors;
- Geographical areas, if applicable.

#### **Systematic Re-inspections**

For systematic re-inspections, this could be due to noticed trends such as specific treatment types (e.g. open-graded mixes), a specific inspector or geographical area. In such cases, more than 5% will be re-inspected.

#### **Acceptability Criteria**

At the time of re-inspection, the actual distresses will be re-inspected and verified, and any corrections made, if necessary. Distress types and severities must be the same, and re-measured quantities within  $\pm 10\%$  of the original measured quantity.

If corrections are required on more than 10% of the re-inspected sample unit, then an additional 5% will be re-inspected. This will continue until more than 95% of the re-inspected sections meet the acceptability criteria.

#### **2.2.2 PCI Comparison with Past Surveys**

As another level of quality control, the new PCIs are compared with the previous PCIs. If they differ by more than  $\pm 10$  PCI points, these sections are automatically flagged for further investigation.

#### **If PCI Increases 10 points**

The section is investigated to see if a maintenance and rehabilitation event has occurred since the last survey, but which has not been recorded. Typically, it may include activities such as:

- Crack sealing activities - changes medium or high severity cracking to low severity
- Patching activities - alligator cracking that has been removed and patched, so that the resultant PCI is increased.
- Surface seals
- Overlay
- Others

Therefore, an up to date maintenance and rehabilitation history file in the MicroPAVER data base is desirable, both for historical accuracy as well as to provide additional quality control.

#### **If PCI decreases 10 points**

The section is checked to see if the average deterioration rate (usually 3 to 4 points per year) is exceeded. If the drop in PCI is within range of what is acceptable, no further action is required. If the drop is more than the acceptable range, a re-inspection will be performed. The default performance curves in the MicroPAVER program form the basis for what is acceptable.

### **2.3 Inspectors Qualifications and Experience**

In 2014 OCTA started a process of pre-qualifying pavement inspectors to insure that the pavement condition data collection and ratings are consist across the County. OCTA also provides training sessions on pavement inspection procedures and the use of PMP software. Harris and Associates staff have attended both types of OCTA training and in spring of 2015 Harris staff tested and prequalified 4 inspectors as part of OCTA's pavement inspector prequalification process. Harris and Associate's pavement inspector prequalified status is current and valid until June 30, 2019

### **3. SAFETY PROCEDURES**

Harris administers a health and safety program in compliance with the Cal OSHA Title VIII, Section 3203. The program is documented in Harris & Associates Injury and Illness Prevention Program.

Generally, the safety procedures include

- Inspectors to wear a Class 2 or 3 safety vest at all times;
- Flashing beacon on all vehicles utilized for surveys; and
- Stopped vehicles to be parked at locations away from moving traffic (e.g. nearby parking, shoulders, etc.).

On streets where there is a high volume of traffic or high speeds, additional measures may be necessary, such as:

- Surveys to occur during off-peak periods or on weekends;
- Additional inspector to watch out for traffic; and
- Traffic flaggers in extreme cases.

### **SECTION III**

### **CONDITION DISTRIBUTION REPORT**

This report graphically depicts the distribution of the pavement condition throughout the street network by Army Corp of Engineers condition groups. The condition ranges from a PCI of 0 “Very Poor” to 100 “Very Good”, with a “Very Good” condition corresponding to a pavement at the beginning of its life cycle, and a “Very Poor” condition representing a badly deteriorated pavement with virtually no remaining life. The table on the following page shows the general pavement condition.

### System Condition Distribution (Residential & Arterial Streets) Avg. Condition: 67

### System Condition Distribution (Residential Streets) Avg. Condition: 71

### System Condition Distribution (Arterial Streets) Avg. Condition: 60

**System Condition Distribution  
(Residential & Arterial Streets)  
Avg. Condition: 67**

### System Condition Distribution (Residential Streets) Avg. Condition: 71

## SECTION IV PAVEMENT CONDITION INDEX (PCI) REPORT

Listed alphabetically by street name and by PCI, the report provides the City with a listing of pertinent inventory and pavement condition data for each pavement section within the City's pavement network. The Pavement Condition Index (PCI) Report notes the names, limits, classification, dimension, pavement class and PCI as of the last inspection for each pavement section.

Detailed common descriptions of the information appearing on this report are presented below:

Street Name - The name of each pavement section appears in this column. Generally, the pavement section name is taken directly from a street sign; however, where no street signs are posted, the name appearing on the network map is noted instead.

Section - The section number along each branch assigned to each pavement segment

From - A description of the beginning limit of each pavement section appears in this column. The limit will note the side of the boundary street from which the segment was taken (e.g., "N/S MAIN ST" refers to the north side of the intersection at Main St). If the beginning limit exists between intersections, then the beginning limit description may be an address, post mile marker, or a distance from a known point of reference (e.g., "500' N/O MAIN ST").

To - A description of the ending limit of each pavement section appears in this column. The description may consist of a street name, an address, or a distance from a known point of reference as described in the above section.

Surface - A code is assigned to each pavement section to describe surface type.

<u>CODE</u>	<u>DESCRIPTION</u>
AAC/AC	Asphalt Concrete

Rank - The rank of each pavement section appears in this column. Typically, street segments are classified according to traffic volume or the agency's circulation element.

<u>CODE</u>	<u>DESCRIPTION</u>
B	Major Arterial
C	Collector
E	Residential
P	Primary Arterial
S	Secondary Arterial
O	Alley

Zone – The designated Maintenance Areas within the City (if applicable).

Lanes – The number of lanes in the pavement section.

Length – The length of the pavement section in linear feet (LF).

Width – The width of the pavement in linear feet (LF).

Area The area of the pavement section in square feet (SF). The length time the width plus any additional pavement area from turn pockets, pullouts, cul-de-sacs, or other variations in the configuration of the pavement segment.

Insp. Date - The date each pavement section was last inspected.

PCI - Pavement Condition Indexes were calculated for pavement sections based on severity and extent of distress manifestations observed within the pavement section. Ranging between 0 and 100, a PCI of "100" corresponds to a pavement at the beginning of its life cycle, while a PCI of "0" corresponds to a badly deteriorated pavement which is at or near the end of its life cycle.

**PROJECTED WORK PROGRAMS**

Detailed street-by-street work program reports are provided in this section for each funding scenario analyzed.

**CURRENT FUNDING LEVEL (\$1.4 M) – RESIDENTIAL & ARTERIAL**  
**MEASURE M & RMRA FUNDING**

At the City’s current expected pavement maintenance budget over the next 11 years of approximately \$1.4 million annually, the amount of deferred maintenance on the network would increase from \$28.9 million to \$62.5 million and the citywide average pavement condition index would decrease from 67 to 47.

**OPTIONAL FUNDING LEVEL (\$3.4 M) – RESIDENTIAL & ARTERIAL  
TO MAINTAIN CURRENT PCI & BACKLOG**

This scenario represents the recommended maintenance required in order for the network to strive to maintain the current PCI over the next 11 years. In order to maintain the average PCI at 64 over the next 11 years, approximately \$3.4 million per year would need to be budgeted. The amount of deferred maintenance on the network would increase from \$28.9 million to \$33 million.

<b>FY</b>	<b>Budget</b>	<b>Work Program</b>	<b>Deferred</b>	<b>Average Condition (Before)</b>	<b>Average Condition (After)</b>

**OPTIONAL FUNDING LEVEL (\$4.6 M) – RESIDENTIAL & ARTERIAL  
 TO IMPROVE PCI & BACKLOG REVENUE**

This scenario represents the recommended maintenance required in order for the network to improve the PCI over the next 11 years. In order to improve the average PCI from 67 to 76 over the next 11 years, approximately \$4.6 million per year would need to be budgeted. The amount of deferred maintenance on the network would decrease from \$28.9 million to \$14.2 million.

<b>FY</b>	<b>Budget</b>	<b>Work Program</b>	<b>Deferred</b>	<b>Average Condition (Before)</b>	<b>Average Condition (After)</b>

**RECOMMENDED FUNDING LEVEL (\$5.0 M) – RESIDENTIAL & ARTERIAL  
TO ACHIEVE COUNTYWIDE AVERAGE PCI**

This scenario represents the street maintenance required to achieve countywide average PCI. If the city could expend approximately \$5.0 million annually over the next 11 years, the average PCI would increase from 67 to 79 by FY2028-29.

<b>FY</b>	<b>Budget</b>	<b>Work Program</b>	<b>Deferred</b>	<b>Average Condition (Before)</b>	<b>Average Condition (After)</b>

# City of Placentia

## 2018 Citywide Pavement Condition Index (PCI)

### Legend

- 2018 PCI**
- VERY GOOD (86-100)
  - GOOD (75-85)
  - FAIR (60-74)
  - POOR (41-59)
  - VERY POOR (0-40)
  - CITY BOUNDARY

3. Grow	38.7%	More planting
4. Fund	34.2%	Funding is inadequate
5. Connect	31.5%	Infrastructure and lighting would make participants feel safer
6. Locate	30.6%	Park locations are adequate
7. Engage	29.7%	Have not participated

The City will create surveys and performance measures to track baselines and monitor the effects of all Complete Parks activities in the community, particularly in areas most lacking in access to outdoor recreational facilities upon adoption of this resolution tonight.

The City will seek feedback from all departments, agencies, and groups involved in Complete Parks implementation, on any activities related to the performance measures established pursuant to this resolution, and prepare reports to evaluate these activities and make improvements.

**FISCAL IMPACT:**

There is no direct fiscal impact as a result of adopting the aforementioned resolution. If adopted, the resolution will enable Staff to utilize the study and other documents to seek grants to assist in the implementation of the initiatives of the plan, including applying for grant funds from the recently voter approved Proposition 68 State Parks Bond.
